Excluded from automatic downgrading and declassification

## Approved For Release 2001/08/13: CIA-RDP78B04747A001100050010-4

25X1A

has assembled a breadboard arrect image, modulated light viewer which was inspected by the monitor and 13 Nov. 64 at

25X1A

The unit consisted of a standard 10 inch Kinescope tube with a photomultiplier tube mounted above at about a 35degree angle. The unit did in fact modulate the positive film image. The level of illumination was only about 30 foot lamberts and somewhat less than would be desired. The color was white. The unit was of sufficient interest to justify a visit by one or two PI's from NPIC to review the concept, even though the demonstration is quite crude and demonstrates only a part of the total concept.
